PEER TUTORING

OBJECTIVES
- What is Peer Tutoring?
- What are the goals of Peer Tutoring?
- What are the various methods of Peer Tutoring?
- Comparison between different methods of Peer Tutoring.
- How can we implement a plausible strategy for Peer Tutoring?

INTRODUCTION
- Peer Tutoring is a flexible, peer-mediated strategy that uses students as academic tutors and tutees.
- A higher performing student is paired with a lower performing student.
- These pairs might work on academic, behavioral, functional, social or even clinical skills.

GOALS
- To promote academic and social development for both the tutor and the tutee.
- To promote the effective learning of clinical skills for medical students.
- To allow students to receive one-to-one assistance.
- To overcome the fear of asking questions in a classroom environment.
- To increase self-confidence and self-efficacy

MODELS OF PEER TUTORING

EVIDENCE OF EFFICACY
Student Evaluation Survey Results
Question: “What do you feel you have gained from the peer tutoring scheme?”
Student Respondents: 28 out of 39

IMPLEMENTATION

CONCLUSION
Peer Tutoring appears to have been effective at enabling students to take more responsibility for their own learning, promoting creative problem solving and developing group-working skills. There has also been a significant benefit for the tutors themselves, who developed additional team-working and leadership skills, as well as growing in confidence and developing a more responsible attitude towards learning. The peer tutoring approach can be implemented with minimal financial cost or staff time, aside from the initial training of the tutors.
