A R T I C L E I N F O	A B S T R A C T
Keywords: Cohort studies Case-control studies Cross-sectional studies Reporting guideline STROCSS	Introduction: Strengthening The Reporting Of Cohort Studies in Surgery (STROCSS) guidelines were developed in 2017 in order to improve the reporting quality of observational studies in surgery and updated in 2019. In order to maintain relevance and continue upholding good reporting quality among observational studies in surgery, we aimed to update STROCSS 2019 guidelines. Methods: A STROCSS 2021 steering group was formed to come up with proposals to update STROCSS 2019 guidelines. Methods: A STROCSS 2021 steering group was formed to come up with proposals to update STROCSS 2019 guidelines. An expert panel of researchers assessed these proposals and judged whether they should become part of STROCSS 2021 guidelines or not, through a Delphi consensus exercise. Results: 42 people (89%) completed the DELPHI survey and hence participated in the development of STROCSS 2021 guidelines. All items received a score between 7 and 9 by greater than 70% of the participants, indicating a high level of agreement among the DELPHI group members with the proposed changes to all the items. Conclusion: We present updated STROCSS 2021 guidelines to ensure ongoing good reporting quality among observational studies in surgery.

1. Introduction

Observational studies often feature in the surgical literature [1]. However, poor reporting quality among observational studies in surgery has been highlighted [2]. In the absence of good reporting quality, readers are unable to meaningfully assess the research, rendering it less useful [3]. The existence of reporting guidelines and the mandatory implementation of these guidelines by journals have shown to improve the reporting quality among various types of studies [4–6].

Hence, Strengthening The Reporting Of Cohort Studies in Surgery (STROCSS) guidelines were developed in 2017 in order to improve the reporting quality of cohort studies in surgery. Despite the title, STROCSS guidelines aimed to improve the reporting quality of all observational studies in surgery, including case-control studies and cross-sectional studies, as well as cohort studies [7]. STROCSS 2017 guidelines were updated in 2019; since its inception, STROCSS guidelines have been cited over 1000 times illustrating their acceptance within the surgical research community [8]. We aimed to update STROCSS 2019 guidelines in order to maintain relevance and continue upholding good reporting quality among observational studies in surgery.

2. Methods

The DELPHI methodology used in the development of STROCSS 2017 and 2019 guidelines was used in the development of STROCSS 2021 guidelines [9].

2.1. Coming up with proposals to update STROCSS 2019 guidelines

A STROCSS 2021 steering group was formed; members collaborated over email, Google Docs and WhatsApp Messenger to come up with proposals to update STROCSS 2019 guidelines.

2.2. Delphi process

The proposals to update STROCSS 2019 guidelines were put to an expert panel of researchers; they were asked to assess the proposals and judge whether they should become part of STROCSS 2021 guidelines or not, through a Delphi consensus exercise.

The Delphi questionnaire was sent to all participants using Google Forms. The participants were required to indicate whether they

7d	4.8	9.5	85.7
7e	0.0	14.3	85.7
7f	0.0	11.9	88.1
8	0.0	9.5	90.5
9	2.4	9.6	88.0
10a	0.0	2.4	97.6
10b	0.0	9.5	90.4
10c	0.0	11.9	88.1
11a	0.0	19.0	80.9
11b	0.0	16.7	83.4
11c	0.0	14.3	85.7
12	0.0	9.6	90.4
13	2.4	19.1	78.5
14	0.0	9.5	90.5
15	0.0	14.3	85.7
16	2.4	14.3	83.3
17a	2.4	14.3	83.3
17b	0.0	4.8	95.2
17c	0.0	2.4	97.5

disagreed or agreed with the proposed changes to the 17 items of the STROCSS 2019 guidelines, using a nine-point Likert scale, where 1 indicated "strongly disagree" and 9 indicated "strongly agree". If greater than 70% of participants gave a score between 7 and 9 for a proposed change, this was deemed as consensus and the item was updated. If less than 70% of participants gave a score between 7 and 9 for a proposed change, the item was left unaltered.

2.3. Participants

Researchers who were involved in the development of STROCSS 2017 and 2019 guidelines were invited to participate again. In addition, members of the International Journal of Surgery (IJS) editorial board were invited; IJS has mandated authors submitting surgical research papers using observational methodology to comply with STROCSS guidelines and hence IJS is an ardent supporter of STROCSS guidelines. Participants were accomplished researchers, authors, journal reviewers, editorial board members and editors representing countries across North America, South America, Europe, Africa, Asia, and Australia.

3. Results

47 people agreed to participate in the development of STROCSS 2021 guidelines; 42 people (89%) completed the DELPHI survey and hence participated in the development of STROCSS 2021 guidelines. Table 1 shows a summary of the scores given by the Delphi participants to indicate agreement or disagreement with the proposed changes to each item of the STROCSS 2019 guidelines. All items received a score between 7 and 9 by greater than 70% of the participants, indicating consensus with the proposed changes to all the items. The revised STROCSS 2021 guidelines are shown in Table 2.

4. Discussion

Since the publication of STROCSS guidelines, it has been cited over 1000 times and thus enjoyed great acceptance within the surgical research community. We present the updated STROCSS 2021 guidelines to continue ensuring good reporting quality among observational studies in surgery; we encourage authors, reviewers, editors, and journals to adopt them.

Authors should cite STROCSS 2021 guidelines in their methods section; additionally, they should submit a completed STROCSS 2021 guidelines checklist alongside their manuscript for reviewers and editors to inspect and ensure compliance. STROCSS website (https://www.strocssguideline.com) has provided the STROCSS 2021 guidelines checklist in various formats to ensure accessibility.

5. Conclusion

We present updated STROCSS 2021 guidelines for authors, reviewers, editors, and journals to implement, with a view to ensuring good reporting quality among observational studies in surgery.

Sources of funding

None.

Ethical approval

Not applicable.

Research registration Unique Identifying number (UIN)

- 1. Name of the registry: Not applicable

The ST	ROCSS 2021 Guideline	
Item	Item description	Page
no.		
TITLE		
1	 Title The word cohort or cross-sectional or case-control is included* Temporal design of study is stated (e.g. retrospective or prospective) The focus of the research study is mentioned (e.g. population, setting, disease, exposure/intervention, outcome etc.) 	
	*STROCSS 2021 guidelines apply to cohort studies as well as other observational studies (e.g. cross-sectional, case-control etc.)	
ABSTF		
2a	Introduction – briefly describe: • Background • Scientific rationale for this study • Aims and objectives	
2b	 Methods - briefly describe: Type of study design (e.g. cohort, case-control, cross-sectional etc.) Other key elements of study design (e.g. retro-/prospective, single/multi-centred etc.) Patient populations and/or groups, including control group, if applicable Exposure/interventions (e.g. type, operators, recipients, timeframes etc.) Outcome measures – state primary and secondary outcome(s) 	
2c	 Results - briefly describe: Summary data with qualitative descriptions and statistical relevance, where appropriate 	
2d	Conclusion - briefly describe: • Key conclusions • Implications for clinical practice • Need for and direction of future research	
INTRO	DUCTION	1
3	 Introduction – comprehensively describe: Relevant background and scientific rationale for study with reference to key literature Research question and hypotheses, where appropriate Aims and objectives 	
METHO		1
4a	 Registration In accordance with the Declaration of Helsinki*, state the research registration number and where it was registered, with a hyperlink to the registry entry (this can be obtained from ResearchRegistry.com, ClinicalTrials.gov, ISRCTN etc.) All retrospective studies should be registered before submission; it should be stated that the research was retrospectively registered 	
	* "Every research study involving human subjects must be registered in a publicly accessible database before recruitment of the first subject"	
4b	 Ethical approval Reason(s) why ethical approval was needed Name of body giving ethical approval and approval number Where ethical approval wasn't necessary, reason(s) are provided 	

4C Protocol 9 Give details of protocol (a priori or otherwise) including how to access it (e.g. web address, protocol registration number etc.) 4d Patient and public involvement in research 4d Patient and public involvement in research 5 State the stages of the research process where patients and the public were involved (e.g. patient recruitment, defining research outcomes, dissemination of results etc.) and describe the extent to which they were involved. 5a Study design 5a Study design 5b Setting and timeframe of research - comprehensively describe: 9 Geographical location 9 Nature of institution (e.g. primary/secondary/tertiary care setting, district general hospital/teaching hospital, public/private, low-resource setting etc.) 9 Dates (e.g. recruitment, exposure, follow-up, data collection etc.) 5c Study groups 9 Total number of groups 9 Detail exposure/intervention allocated to each group 5d Subgroup analysis – comprehensively describe: 9 Planned subgroup analyses 9 Number of groups 9 Number of groups 9 Number of participants in each patient interactions 6a	4		
(e.g. web address, protocol registration number etc.) If published in a journal, cite and provide full reference 4d Patient and public involvement in research 5d State the stages of the research process where patients and the public were involved (e.g. patient recruitment, defining research outcomes, dissemination of results etc.) and describe the extent to which they were involved. 5a Study design 5a Study type of study design used (e.g. cohort, cross-sectional, case-control etc.) 5b Setting and timeframe of research – comprehensively describe: 6 Geographical location Nature of institution (e.g. primary/secondary/tertiary care setting, district general hospital/teaching hospital, public/private, low-resource setting etc.) 5c Study groups 6 Study groups Total number of participants 7 Detail exposure/intervention allocated to each group Number of participants in each group 6 Methods used to examine subgroups and their interactions Source of recruitment (e.g. physician referal, study website, social media, posters etc.) 6 Recruitment - comprehensively describe: Inclusion and exclusion of patients of provide set is reached etc.) 7 Otal number of participants Subgroup analyses 8 Methods used to examine subgroups and their interactions 6 Subgroup analyses	4c	Protocol	
• If published in a journal, cite and provide full reference 4d Patient and public involvement in research 5a State the stages of the research process where patients and the public were involved (e.g. patient recruitment, defining research outcomes, dissemination of results etc.) and describe the extent to which they were involved (e.g. patient recruitment, defining research outcomes, dissemination of results etc.) and describe the extent to which they were involved (e.g. patient recruitment, defining research outcomes, single/multi-centred etc.) 5a Study design 5a Study design losed (e.g. cohort, cross-sectional, case-control etc.) 5b Setting and timeframe of research – comprehensively describe: Geographical location • Rature of institution (e.g. primary/secondary/tertiary care setting, district general hospital/teaching hospital, public/private, low-resource setting etc.) 5c Study groups • Dates (e.g. recruitment, exposure, follow-up, data collection etc.) 5d Subgroup analysis – comprehensively describe: • Planned subgroup analyses • Detail exposure/intervention allocated to each group • Number of graticipants 6d Participants – comprehensively describe: • Planned subgroup analyses • Methods used to examine subgroups and their interactions 6a 6a Participants – comprehensively describe: • Planned subgroup analyses <			
4d Patient and public involvement in research • Declare any patient and public involvement in research 5 • State the stages of the research process where patients and the public were involved (e.g. patient recruitment, defining research outcomes, dissemination of results etc.) and describe the extent to which they were involved. 5a Study design • State type of study design used (e.g. cohort, cross-sectional, case-control etc.) 5b Section and function of research – comprehensively describe: • Geographical location 5b Setting and timeframe of research – comprehensively describe: • Geographical location • Nature of institution (e.g. primary/secondary/tertiary care setting, district general hospital/teaching hospital, public/private, low-resource setting etc.) 5c Study groups • Total number of participants • Number of groups • Total number of participants • Number of participants in each group • Number of participants 6a Participants – comprehensively describe: • Planned subgroup analyses • Methods used to examine subgroups and their interactions 6a Participants – comprehensively describe: • Inclusion and exclusion criteria with clear definitions • Sources of recruitment (e.g. physician referral, study website, social media, posters etc.) 6b Recruitment - comprehensively describe:			
• Declare any patient and public involvement in research • State the stages of the research process where patients and the public were involved (e.g. patient recruitment, defining research outcomes, dissemination of results etc.) and describe the extent to which they were involved. 5a Study design • State type of study design used (e.g. cohort, cross-sectional, case-control etc.) 5b Setting and timeframe of research – comprehensively describe: • Geographical location • Nature of institution (e.g. primary/secondary/tertiary care setting, district general hospital/teaching hospital, public/private, low-resource setting etc.) • Dates (e.g. recruitment, exposure, follow-up, data collection etc.) 5c Study groups • Datas (e.g. recruitment, exposure, follow-up, data collection etc.) 5d Sugroups analysis – comprehensively describe: • Datas (e.g. recruitment, exposure, follow-up, data collection etc.) 5d Sugroup analysis – comprehensively describe: • Detail exposure/intervention allocated to each group 5d Sugroup analysis – comprehensively describe: • Inclusion and exclusion criteria with clear definitions 6a Participants – comprehensively describe: • Inclusion and exclusion or theria with clear definitions 6a Participants – comprehensively describe: • Methods of recruitment to each patient group (e.g. all at once, in batches, continuously till desired sample size is reached etc.)			
• State the stages of the research process where patients and the public were involved (e.g. patient recruitment, defining research outcomes, dissemination of results etc.) and describe the extent to which they were involved. 5a Study design • State type of study design used (e.g. cohort, cross-sectional, case-control etc.) • Describe other key elements of study design (e.g. retro-/prospective, single/multi-centred etc.) 5b Setting and timeframe of research – comprehensively describe: • Geographical location • Nature of institution (e.g. primary/secondary/tertiary care setting, district general hospital/teaching hospital, public/private, low-resource setting etc.) 5c Study groups • Total number of participants • Number of groups • Detail exposure/intervention allocated to each group • Number of participants in each group 5d Subgroup analysis – comprehensively describe: • Planned subgroup analyses • Methods used to examine subgroups and their interactions 6a Participants – comprehensively describe: • Inclusion and exclusion criteria with clear definitions • Sources of recruitment (e.g. physician referral, study website, social media, posters etc.) • Length, frequency and methods of follow-up (e.g. all at once, in batches, continuously till desired sample size is reached etc.) 6b Recruitment – comprehensively describe: • Methods of ercruit	4d		
were involved (e.g. patient recruitment, defining research outcomes, dissemination of results etc.) and describe the extent to which they were involved. 5a Study design • State type of study design used (e.g. cohort, cross-sectional, case-control etc.) • Describe other key elements of study design (e.g. retro-/prospective, single/multi-centred etc.) 5b Setting and timeframe of research – comprehensively describe: • Geographical location • Nature of institution (e.g. primary/secondary/tertiary care setting, district general hospital/teaching hospital, public/private, low-resource setting etc.) 5c Study groups • Dates (e.g. recruitment, exposure, follow-up, data collection etc.) 5c Study groups • Datal number of participants • Number of groups • Detail exposure/intervention allocated to each group 5d Subgroup analysis – comprehensively describe: • Planned subgroup analyses • Methods used to examine subgroups and their interactions 6a Participants – comprehensively describe: • Length, frequency and methods of follow-up (e.g. anal, telephone etc.) 6b Recruitment - comprehensively describe: • Methods of recruitment to each patient group (e.g. all at once, in batches, continuously till desired sample size is reached etc.) • Any monetary incentivisation of patients for recruitment and retention should be declared; clarify

care etc.)			
		care etc.)	

7b	Intervention – comprehensively describe:	
10	Type of intervention and reasoning (e.g. pharmacological, surgical,	
	physiotherapy, psychological etc.)	
	Aim of intervention (preventative/therapeutic)	
	Concurrent treatments (e.g. antibiotics, analgesia, anti-emetics, VTE	
	prophylaxis etc.)	
	Manufacturer and model details, where applicable	
7c	Intra-intervention considerations – comprehensively describe:	
	Details pertaining to administration of intervention (e.g. anaesthetic,	
	positioning, location, preparation, equipment needed, devices, sutures,	
	operative techniques, operative time etc.)	
	 Details of pharmacological therapies used, including formulation, 	
	dosages, routes, and durations	
	 Figures and other media are used to illustrate 	
7d	Operator details – comprehensively describe:	
	 Requirement for additional training 	
	Learning curve for technique	
	Relevant training, specialisation and operator's experience (e.g. average	
	number of the relevant procedures performed annually)	
7e	Quality control – comprehensively describe:	
	 Measures taken to reduce inter-operator variability 	
	 Measures taken to ensure consistency in other aspects of intervention 	
	delivery	
	 Measures taken to ensure quality in intervention delivery 	
7f	Post-intervention considerations – comprehensively describe:	
	 Post-operative instructions (e.g. avoid heavy lifting) and care 	
	Follow-up measures	
	Future surveillance requirements (e.g. blood tests, imaging etc.)	
8	Outcomes – comprehensively describe:	
	 Primary outcomes, including validation, where applicable 	
	 Secondary outcomes, where appropriate 	
	Definition of outcomes	
	If any validated outcome measurement tools are used, give full reference	
	 Follow-up period for outcome assessment, divided by group 	
9	Statistics – comprehensively describe:	
	 Statistical tests and statistical package(s)/software used 	
	 Confounders and their control, if known 	
	 Analysis approach (e.g. intention to treat/per protocol) 	
	Any sub-group analyses	
	Level of statistical significance	
RESU		
10a	Participants – comprehensively describe:	
	Flow of participants (recruitment, non-participation, cross-over and	
	withdrawal, with reasons). Use figure to illustrate.	
	Population demographics (e.g. age, gender, relevant socioeconomic	
	features, prognostic features etc.)	
4.01	Any significant numerical differences should be highlighted	
10b	Participant comparison	
	Include table comparing baseline characteristics of cohort groups	
	Give differences, with statistical relevance	
	Describe any group matching, with methods	
10c	Intervention – comprehensively describe:	

	Degree of novelty of intervention	
	Learning required for interventions	
	Any changes to interventions, with rationale and diagram, if appropriate	
11a	Outcomes – comprehensively describe:	
	Clinician-assessed and patient-reported outcomes for each group	
	Relevant photographs and imaging are desirable	
	Any confounding factors and state which ones are adjusted	
11b	Tolerance – comprehensively describe:	
	Assessment of tolerability of exposure/intervention	
	Cross-over with explanation	
4.4	Loss to follow-up (fraction and percentage), with reasons	
11c	Complications – comprehensively describe:	
	Adverse events and classify according to Clavien-Dindo classification* Timing of adverse events	
	Timing of adverse events	
	Mitigation for adverse events (e.g. blood transfusion, wound care, revision surgery etc.)	
	*Dindo D, Demartines N, Clavien P-A. Classification of Surgical Complications. A	
	New Proposal with Evaluation in a Cohort of 6336 Patients and Results of a Survey. Ann Surg. 2004; 240(2): 205-213	
12	Key results – comprehensively describe:	
	 Key results with relevant raw data 	
	 Statistical analyses with significance 	
	Include table showing research findings and statistical analyses with	
	significance	
DISCU		
13	Discussion – comprehensively describe:	
	Conclusions and rationale	
	Reference to relevant literature	
	Implications for clinical practice	
	Comparison to current gold standard of care	
11	Relevant hypothesis generation	
14	Strengths and limitations – comprehensively describe:	
	Strengths of the study Weeknesses and limitations of the study and notantial impact on results	
	Weaknesses and limitations of the study and potential impact on results and their interpretation	
	and their interpretationAssessment and management of bias	
	 Assessment and management of bias Deviations from protocol, with reasons 	
15	Relevance and implications – comprehensively describe:	
10	Relevance of findings and potential implications for clinical practice	
	 Need for and direction of future research, with optimal study designs 	
	mentioned	
CONC	LUSION	
16	Conclusions	_
	Summarise key conclusions	
	Outline key directions for future research	
DECLA	ARATIONS	
17a	Conflicts of interest	
	Conflicts of interest, if any, are described	
17b	Funding	
	 Sources of funding (e.g. grant details), if any, are clearly stated 	
	Role of funder	
17c	Contributorship	
	Acknowledge patient and public involvement in research; report the extent of	
	involvement of each contributor	

Declaration of competing interest
