Table S1. Data sources and modelling approach by emissions source category and basis for time series projections and backcasts

Emissions Source Category	Modeling approach	Data Source	Actual data	Backcast years	Projection years	Basis for backcast and projections
Building energy use – hospitals	Bottom up	ERIC	1990 - 2018	n/a	2019	Continuing trends
Building energy use – other sites (GP, offices)	Bottom up	Sample data source	2014 – 2015	1990 – 2013	2016 – 2019	Backcast based on hospital energy use; Forecast based on expenditures adjusted for inflation
Inhaled Anaesthetics - volatiles	Bottom up	Supplier information	2016 – 2019	1990 – 2015	n/a	Backcast based on bed days
Inhaled Anaesthetics – nitrous oxide	Bottom up	Supplier information	2011	1990 – 2010	2012 – 2019	Surgical nitrous oxide: backcast and forecast using bed days Maternity nitrous oxide: backcast and forecast based on the number of maternities Emergency nitrous oxide: backcast and projection based on A&E attendances Ambulance nitrous oxide: backcast and projection based on ambulance calls that receive face-to-face response from the ambulance service
Meter Dose Inhalers HFCs	Bottom up	NAEI	2006 – 2017	1990 – 2005	2017 – 2019	Backcast using linear increase from introduction of HFC inhalers in 1997
Meter Dose Inhalers CFCs	Bottom up	NAEI	1990	n/a	1991 – 2019	Linear reduction 1990 to 2006; 0 afterwards
Water, Wastewater, and Solid Waste	Top down	UK MRIO	1997 – 2016	1990 – 1996	2017 – 2019	Expenditures adjusted for inflation
Electricity factors	Bottom up	BEIS Green Book	2002 – 2017 2018 – 2019	1990 - 2002	n/a	n/a
Personal travel – staff commuting, visitor, patient	Top down	NTS	2002 – 2018	1990 – 2001	2019	Continuing trends
Fleet and business travel	Top down	UK MRIO	1997 – 2016	1990 – 1996	2017 – 2019	Expenditures adjusted for inflation
Supply Chain	Top down	UK MRIO	1997 – 2016	1990 – 1996	2017 – 2019	Expenditures adjusted for inflation

Emissions Source Category	Modeling approach	Data Source	Actual data	Backcast years	Projection years	Basis for backcast and projections
Commissioned	Top down	UK MRIO	1997 – 2016	1990 – 1996	2017 – 2019	Expenditures adjusted for inflation

Table S2. ERIC data definitions

Total electricity consumed for a site = Electricity consumed (S06_02) + Electricity consumed - green energy tariff (S06_10) + Electricity consumed - third party owned renewable (S06_12) + Electrical energy output of CHP system(s) (S05_06) - Exported electricity (S05_07)																			
Scope 2 energy for a site = Electricity consumed (S06_02) + Electricity consumed - green energy tariff (S06_10) + Electricity consumed - third party owned renewable (S06_12) - Exported electricity (S05_07) + Steam consumed (S06_16) + Hot water consumed (S06_17) - Exported thermal energy (S05_08)																			
<table border="1"> <thead> <tr> <th>Ref</th><th>Field</th><th>Unit</th><th>Definition</th></tr> </thead> <tbody> <tr> <td>S06_02</td><td>Electricity consumed</td><td>kWh</td><td>The total amount of electricity consumed from the national/regional/local electricity supplier. Include energy used to feed CHP plant associated with the site and energy used by the organisation site for processing purposes (e.g. laundry, CSSD). In cases where the organisation site includes an on-site central processing unit(s) which serves more than one organisation site, the input energy to this unit should be apportioned in accordance with the percentage output used by the organisation for its own purposes (e.g. if the organisation uses 30% of the processing unit output then the figure included should be 30% of the total amount of energy supplied to the processing unit). Exclude energy derived from an eligible renewable energy source.	S06_04	Gas consumed	kWh	The total amount of gas consumed from the national /regional gas supplier, including LPG. Include energy used to feed CHP plant associated with the site, and energy used by the organisation site for processing purposes (e.g. laundry, CSSD). In cases where the organisation site includes an on-site central processing unit(s) which serves more than one organisation site, the input energy to this unit should be apportioned in accordance with the percentage output used by the organisation for its own purposes (e.g. if the organisation uses 30% of the processing unit output then the figure included should be 30% of the total amount of energy supplied to the processing unit).	S06_06	Oil consumed	kWh	The total amount of oil consumed from the national /regional oil supplier. Consumption should be adjusted for accrued liabilities. Include energy used to feed CHP plant associated with the site, and energy used by the organisation site for processing purposes (e.g. laundry, CSSD). In cases where the organisation site includes an on-site central processing unit(s) which serves more than one organisation site, the input energy to this unit should be apportioned in accordance with the percentage output used by the organisation for its own purposes. (For example, if the organisation uses 30% of the processing unit output, then the figure included should be 30% of the total amount of energy supplied to the processing unit).
Ref	Field	Unit	Definition																
S06_02	Electricity consumed	kWh	The total amount of electricity consumed from the national/regional/local electricity supplier. Include energy used to feed CHP plant associated with the site and energy used by the organisation site for processing purposes (e.g. laundry, CSSD). In cases where the organisation site includes an on-site central processing unit(s) which serves more than one organisation site, the input energy to this unit should be apportioned in accordance with the percentage output used by the organisation for its own purposes (e.g. if the organisation uses 30% of the processing unit output then the figure included should be 30% of the total amount of energy supplied to the processing unit). Exclude energy derived from an eligible renewable energy source.																
S06_04	Gas consumed	kWh	The total amount of gas consumed from the national /regional gas supplier, including LPG. Include energy used to feed CHP plant associated with the site, and energy used by the organisation site for processing purposes (e.g. laundry, CSSD). In cases where the organisation site includes an on-site central processing unit(s) which serves more than one organisation site, the input energy to this unit should be apportioned in accordance with the percentage output used by the organisation for its own purposes (e.g. if the organisation uses 30% of the processing unit output then the figure included should be 30% of the total amount of energy supplied to the processing unit).																
S06_06	Oil consumed	kWh	The total amount of oil consumed from the national /regional oil supplier. Consumption should be adjusted for accrued liabilities. Include energy used to feed CHP plant associated with the site, and energy used by the organisation site for processing purposes (e.g. laundry, CSSD). In cases where the organisation site includes an on-site central processing unit(s) which serves more than one organisation site, the input energy to this unit should be apportioned in accordance with the percentage output used by the organisation for its own purposes. (For example, if the organisation uses 30% of the processing unit output, then the figure included should be 30% of the total amount of energy supplied to the processing unit).																

S06_08	Coal consumed	kWh	The total amount of coal consumed from the national /regional coal supplier. Include energy used to feed any CHP plant associated with the site, and energy used by the organisation site for processing purposes (e.g. laundry, CSSD). In cases where the organisation site includes (an) on-site central processing unit(s) which serves more than one organisation site, the input energy to this unit should be apportioned in accordance with the percentage output used by the organisation for its own purposes (e.g. if the organisation uses 30% of the processing unit output then the figure included should be 30% of the total amount of energy supplied to the processing unit).
S06_10	Electricity consumed - green energy tariff	kWh	The total annual amount of electricity from renewable or green energy tariffs supplied by national/regional or local electricity supplier e.g. Crown Commercial Services "green energy". If a proportion supplied electricity is from a green energy tariff then only the proportion which is a 'green energy tariff' should be reported here. The sum of the electricity consumed, green energy tariff and third party owned renewable will be the total 'intake' of electrical energy delivered to the site.
S06_12	Electricity consumed - third party owned renewable	kWh	The total annual amount of electricity consumed from renewable sources owned and supplied by national/regional or local electricity supplier but not supplied through the national power grid e.g. onsite renewable rent-a-roof schemes, community owned/funded renewable energy projects or supplies bought via a private wire from a renewable supply. Consumption should be adjusted for accrued liabilities. Exclude energy consumed via green energy tariffs and organisation owned renewable generation. Include energy used by the organisation site for processing purposes (e.g. laundry, CSSD). In cases where the organisation site includes (an) on-site central processing unit(s) which serves more than one organisation site, the input energy to this unit should be apportioned in accordance with the percentage output used by the organisation for its own purposes. (For example, if the organisation uses 30% of the processing unit output, then the figure included should be 30% of the total amount of energy supplied to the processing unit). Note: Please report all third party owned and operated renewable electricity consumed here.
S06_14	Non-fossil fuel consumed - renewable	kWh	The total annual amount of non-fossil fuel from renewable energy consumed for combustion (e.g. heating boilers) which has been supplied from an eligible renewable energy supply source as defined in Protocol A3 of DEFRA "Guidelines for the Measurement and Reporting of Emissions by Direct Participants in the UK Emissions Trading Scheme" (e.g. wind energy, hydro power (up to 20MW output), tidal power, wave energy, photovoltaics (solar panels), photoconversion, geothermal hot dry rock, geothermal aquifers, municipal and industrial wastes, landfill gas, agricultural and forestry wastes, sewerage gas, biomass, etc). Such energy to be exempt from the Climate Change Levy (CCL), which is evidenced by a Levy Exemption Certificate that confirms that electricity generated from qualifying renewable sources are exempt from the Levy. Please see the 'Guidelines for the Measurement and Reporting of Emissions by Direct Participants in the UK Emissions Trading Scheme' guidance document, which is available from the 'Downloads' section in the ERIC module of the Estates and Facilities Management (EFM) system.
S06_16	Steam consumed	kWh	Total annual amount of steam consumed which has been supplied by an organisation other than regional/national supplier sources (e.g. a neighbouring organisation supplying steam to the site from their incinerator or central boiler plant and distribution system). Exclude energy derived from an eligible renewable energy source.
S06_17	Hot water consumed	kWh	Total annual amount of hot water consumed which has been supplied by an organisation other than regional/national supplier sources (e.g. a neighbouring organisation supplying hot water to the site from their main distribution system.) Exclude energy derived from an eligible renewable energy source.
S06_18	Electrical energy output of owned onsite renewables	kWh	The total annual amount of electricity output from owned onsite low or zero carbon renewable generation, inclusive of exported electricity. Excludes electrical energy output of CHP recorded separately. The sum of the electrical output of CHP and onsite renewable electrical energy will be the total 'generated' onsite electrical energy.
S05_05	Thermal energy output of CHP system(s)	kWh	The total useful thermal energy output, inclusive of exported thermal energy.
S05_06	Electrical energy output of CHP system(s)	kWh	The total electrical energy output, inclusive of exported electricity.

S05_07	Exported electricity of CHP system(s)	kWh	The amount of surplus electricity in kWh produced by the trust site from CHP plant which is supplied to a utility supplier or another organisation site. Please note that the imported energy provided to other trusts completing an ERIC return should include this in their electricity consumed field.
S05_08	Exported thermal energy of CHP system(s)	kWh	The amount of surplus thermal energy in kWh produced by the organisation site from CHP plant which is supplied to a utility supplier or another organisation site. Please note that the imported energy provided to other trusts completing an ERIC return should include this in the relevant energy field.

Table S3. Estimates for excluded building categories from ERIC (2015)

Healthcare building type	Energy Use (GWh)			GHG Emissions (ktCO2e)				Source
	Electricity	Gas	Oil	Electricity	Gas	Oil	Total	
General Practice (GP)	305	455	0	189	94	0	283	Sheffield GP survey
Dentists	79	221	0	49	46	0	94	Independent research ¹

Table S8. Summary of accounting for transport-related emissions

Description	Scope	Carbon footprint category	Source
Fleet vehicles owned or leased by NHS including ambulance services	Scope 1	Business travel	Supply Chain EEIO
Leased vehicles used by essential users for business miles and personal use (for business miles only)	Scope 1	Business travel	Supply Chain EEIO
Dedicated car club vehicles (i.e. where the Trust has secured preferential access to the vehicle) or vehicles hired for >5 days	Scope 1	Business travel	Supply Chain EEIO
Personal vehicles used by staff for business miles (known as grey fleet)	Scope 3	Business travel	Supply Chain EEIO
Public transport, taxis, flights, short term hire vehicles etc. used by staff	Scope 3	Business travel	Supply Chain EEIO
Non-Emergency Patient Transport services provided by a private provider (where paid for by the NHS)	Scope 3	Business services	Supply Chain EEIO
Public transport, taxis, personal vehicles used by patients (where paid for by the NHS)	Scope 3	Business travel	Supply Chain EEIO
Courier, logistics, post etc.	Scope 3	Business services	Supply Chain EEIO
Freight transport	Scope 3	Freight transport	Supply Chain EEIO
Staff commute to and from NHS sites	Scope 3	Personal travel - staff commute	National Travel Survey
Patient travel to and from NHS sites including primary care such as pharmacy and GP and patient transport services not paid for by the NHS	Non-Protocol	Personal travel - Patient travel	National Travel Survey
Visitor travel accompanying patients, visiting patients in hospital, escort etc.	Non-Protocol	Personal travel - Visitor travel	National Travel Survey

Table S9. Average commuter trip distance of health professionals by employment status and region of workplace, 3-year averages, 2011-2017, calculated by the Department for Transport from Table NTS0411

Outside London	Average miles per trip				
	2011-2013	2012-2014	2013-2015	2014-2016	2015-2017
Employment status:					
Full-time employment	8.3	8.2	8.0	8.3	8.8
Part-time employment	5.5	5.7	5.9	6.0	6.2
All people in employment	7.6	7.7	7.6	7.9	8.3
Unweighted sample size (individuals):					
Full-time employees	1,126	1,171	1,153	1,181	1,193
Part-time employees	565	535	505	488	495
All types of employment	1,691	1,706	1,658	1,669	1,688
London	Average miles per trip				
	2011-2013	2012-2014	2013-2015	2014-2016	2015-2017
Employment status:					
Full-time employment	8.4	8.0	8.8	8.9	9.2
Part-time employment	6.0	6.4	5.6	5.7	4.7
All people in employment	7.9	7.7	8.3	8.5	8.6
Unweighted sample size (individuals):					
Full-time employees	217	239	245	254	266
Part-time employees	77	74	72	69	69
All types of employment	294	313	317	323	335

Section S1. GHG emissions accounting methods description

For each NHS emissions category i , emissions E_i are calculated by multiplying the quantity of consumption M_i by the corresponding emissions factor (EF) $_i$:

$$E_i = M_i \times (\text{EF})_i$$

Data sources for the quantity of consumption and corresponding emissions factors are provided in the main text and associated Supplementary Appendix tables, summarized again here.

- **Buildings.** Emissions factors for fuels and electricity are taken from the UK Government Energy (BEIS) and Environment (DEFRA) ministry publications for 2002-2019, and from company reporting guidance for older calculations (Table S4).^{1,2}
- **Anaesthetic gases.** Emissions factors for the volatiles (sevoflurane, isoflurane, desflurane) are taken from Sulbaek-Anderson (2011) and for N₂O from the IPCC AR5 report.^{3,4}
- **Metered dose inhalers.** Emissions factors for all propellants are from the IPCC AR5 report.⁴
- **Transport.** Emissions factors are taken from BEIS including both scope 1 (direct emissions) and scope 3 (well-to-tank emissions) (Table S11).¹
- **Supply chain.** Emissions factors are calculated from UK MRIO model as follows, using standard input-output techniques. \mathbf{A} is the direct requirements matrix for the global economy, relating the sector output from each sector of the UK economy and three regional economies (EU, China, and Rest-of-World), 106 sectors in each region for a total of 424 sectors. Let \mathbf{Y}_j be the vector of unit final demand for sector j (final demand of unity in sector j and zeros for all other sectors). The vector of required output from each sector X_j is then:

$$X_j = [\mathbf{I} - \mathbf{A}]^{-1} \mathbf{Y}_j$$

where \mathbf{I} is the identity matrix.

Let R be a vector of direct GHG emissions in kg CO₂e per unit of monetary output (£) in each sector of the UK MRIO model, as compiled from national emissions inventories. Then the supply chain emissions factor (EF) $_j$ of kg CO₂e per unit of healthcare expenditure in sector j is given by:

$$(\text{EF})_j = RX_j = R[\mathbf{I} - \mathbf{A}]^{-1} \mathbf{Y}_j$$

These supply chain emissions factors are provided in Table S6.

Section S2. Forecasting / Backcasting methods description

Forecasting and backcasting for bottom-up estimation categories was done using linear extrapolation or by scaling based on changes in measurable quantities, including hospital energy use, expenditures, or clinical activity, expressed as Q . Emissions E_i^m for sector i in year m are backcast or forecast to year n to determine emissions in that year E_i^n , according to:

$$E_i^n = E_i^m \times \left(\frac{Q^n}{Q^m} \right)$$

Forecasting for top-down estimation categories was performed through the following steps.

Health expenditure forecasts are expressed as a percentage of GDP for each future year t (from 2019):

$$\text{GDP}(t) = \text{GDP}(t-1) \times \frac{\text{GDPdeflator}(t)}{\text{GDPdeflator}(t-1)} \times \frac{100}{100 + \text{CPI}(t)}$$

Based on this the health expenditure can be calculated and then NHS expenditure as a static proportion of health expenditure (other health expenditure has been assumed to remain a static percentage).

Health Expenditure future time series (from 2016 for consistent time series):

$$\text{Health Expenditure}(t) = \text{GDP}(t) \times \text{Health \% of GDP}(t)$$

NHS Expenditure:

$$\text{NHS Expenditure}(t > 2016) = \frac{\text{Health Expenditure}(t) \times \text{NHS Expenditure}(t-1)}{\text{Health Expenditure}(t-1)}$$

The NHS expenditure forecast is then split into the emissions categories used in the carbon footprint:

$$\begin{aligned} \text{Expenditure}(t, \text{category } x) &= \text{NHS Expenditure}(t) \times \sum_{\text{SIC}=1}^{\text{SIC}=109} \text{concordance}(\text{SIC}, x) \\ &\quad \times \text{proportion of spend}(\text{SIC}, t) \end{aligned}$$

Some expenditure categories are excluded where bottom-up information replaces the MRIO estimates to remove duplication. Expenditure categories included in the model are totalled up to

give NHS procurement spend. Multipliers were created to estimate time series GDP growth and inflation of NHS procurement spend.

$$\text{Multiplier } (t < 2015) = \prod_{t+1}^{t=2015} \text{average} \left(\frac{\text{GDP}(t) * \text{GDP multiplier}}{\text{GDP}(t-1)}, \frac{\text{NHS Expenditure}(t)}{\text{NHS Expenditure}(t-1)} \right)$$

GDP multiplier is set so that expenditure in the period 1990-2015 is flattened:

$$\text{Multiplier } (t > 2015) = \frac{1}{\prod_{t=2015}^t \text{average} \left(\frac{\text{GDP}(t) * \text{GDP multiplier}}{\text{GDP}(t-1)}, \frac{\text{NHS Expenditure}(t)}{\text{NHS Expenditure}(t-1)} \right)}$$

Expenditure is then flattened based on GDP and NHS expenditure growth to reduce the number of variables in the model. This was used to create a time series from 1990 to latest year capturing only year-to-year fluctuations in spend by the NHS. An accelerator was introduced to represent the decoupling of growth and carbon intensity. The value of this accelerator was set so that expenditure was flat:

$$\text{Accelerator} = \lambda \times \frac{\sum_{t=1990}^{t=2016} \text{GDP multiplier}(t) - \sum_{t=1990}^{t=2016} \text{NHS multiplier}(t)}{t}$$

The value of λ was set so that the following chart was flat, the value was 1 for the final model.

Deflated procurement was calculated by flattening expenditure as follows:

$$\text{NHS procurement spend flat } (t \leq 2016) = \text{ NHS procurement spend } (t) \times \text{Multiplier } (t) \\ \times \text{Accelerator}$$

$$\text{NHS procurement spend flat } (t > 2016) = \text{ NHS procurement spend flat } (t - 1)$$

From this, flattened carbon intensities were calculated:

$$\text{Intensity flat } (t \leq 2016, \text{category } x) = \frac{\text{Emissions } (t, \text{category } x)}{\text{NHS procurement spend flat}(t)}$$

$$\text{Intensity flat } (t > 2016, \text{category } x) = \text{growth} (\text{Intensity flat } (2008 \rightarrow 2016), t)$$

(*n.b.*, this is using the whole procurement expenditure and therefore is not the category carbon intensity and is only used for total procurement emissions. Lower levels of carbon intensity were considered too volatile to forecast individually)

Using flattened carbon intensities and flattened expenditure, the carbon emissions forecast was then created:

$$\text{Carbon emissions } (t > 2016, \text{category } x) \\ = \text{Intensity flat } (t, \text{category } x) \times \text{NHS procurement spend flat } (t)$$
