The globalisation of world trade in combination with the use of information and communications technologies is bringing into being a new international division of labour, not just in manufacturing industry, as in the past, but also in work involving the processing of information.

Organisational restructuring shatters the unity of the traditional workplace, both contractually and spatially, dispersing work across the globe in ever-more attenuated value chains.

A new ‘cybertariat’ is in the making, sharing common labour processes, but working in remote offices and call centres which may be continents apart and occupying very different cultural and economic places in local economies.

The implications of this are far-reaching, both for policy and for scholarship. The dynamics of this new global division of labour cannot be captured adequately within the framework of any single academic discipline. On the contrary they can only be understood in the light of a combination of insights from fields including political economy, the sociology of work, organisational theory, economic geography, development studies, industrial relations, comparative social policy, communications studies, technology policy and gender studies.

Work organisation, labour and globalisation aims to:

• bring together insights from all of these fields to create a single authoritative source of information on the new global division of labour, combining theoretical analysis with the results of empirical research in a way that is accessible both to the research community and to policy makers;
• provide a single home for articles which specifically address issues relating to the changing international division of labour and the restructuring of work in a global knowledge-based economy;
• bring together the results of empirical research, both qualitative and quantitative, with theoretical analyses in order to inform the development of new interdisciplinary approaches to the study of the restructuring of work, organisation and labour in a global context;
• be global in scope, with a particular emphasis on attracting contributions from developing countries as well as from Europe, North America and other developed regions;
• encourage a dialogue between university-based researchers and their counterparts in international and national government agencies, independent research institutes, trade unions and civil society as well as policy makers. Subject to the requirements of scholarly peer review, it is open to submissions from contributors working outside the academic sphere and encourages an accessible style of writing in order to facilitate this goal;
• complement, rather than compete with existing discipline-based journals;
• bring to the attention of English-speaking readers relevant articles originally published in other languages.
