

**Additional Supporting Information may be found in the online version of this article. The supporting information is found in the following tables:**

- **Table S1: ICBS HBsAg Clinical Panel**
- **Table S2: Analytical sensitivities of the 70 HBsAg test kits evaluated**
- **Table S3: Day delay in detection of HBsAg during seroconversion at various assays' detection limits**
- **Table S 4: Sensitivity of HBsAg assays in the ICBS HBsAg Clinical Panel and results for the samples which showed difficulties to be detected by some HBsAg test kits**

**Table S1:** ICBS HBsAg Clinical Panel

| ICBS HBsAg sample # | Country of origin | HBV Genotype | HBsAg Subtype | ICBS HBsAg sample # | Country of origin | HBV Genotype | HBsAg Subtype |
|---------------------|-------------------|--------------|---------------|---------------------|-------------------|--------------|---------------|
| 1001                | Ivory Coast       | E            | Ayw4          | 1074                | Brazil            | A            | adw2          |

## Footnotes

Negative and equivocal results are **bold**.

<sup>10)</sup> Test kits sorted according to their analytical sensitivity (see Table S2).

<sup>2)</sup> S/co values  $\geq 1$  are positive, s/co values  $<1$  are negative.

<sup>3)</sup> IU/mL for the Architect HBsAg assay (Abbott), values  $\geq 0.05$  IU/mL are positive, values  $< 0.05$  IU/mL are negative.

<sup>4)</sup> Rapid assay reading: positive, equivocal, negative.

† These rapid assays were negative in further samples not shown in this **Table** as explained in the results' section 3.3
