1. GATHER Statement

Supplementary box 1: GATHER Statement.

Item #	Checklist item	Reported on page #
Objectives and funding		
1	Define the indicator(s), populations (including age, sex, and geographic entities), and time period(s) for which estimates were made.	4-6
2	List the funding sources for the work.	12
Data Inputs		
<i>For all data inputs from multiple sources that are synthesized as part of the study:</i>		
3	Describe how the data were identified and how the data were accessed.	4-5
4	Specify the inclusion and exclusion criteria. Identify all ad-hoc exclusions.	4-6
5	Provide information on all included data sources and their main characteristics. For each data source used, report reference information or contact name/institution, population represented, data collection method, year(s) of data collection, sex and age range, diagnostic criteria or measurement method, and sample size, as relevant.	Appendix pp 29-282
6	Identify and describe any categories of input data that have potentially important biases (e.g., based on characteristics listed in item 5).	NA
<i>For data inputs that contribute to the analysis but were not synthesized as part of the study:</i>		
7	Describe and give sources for any other data inputs.	5-6
<i>For all data inputs:</i>		
8	Provide all data inputs in a file format from which data can be efficiently extracted (e.g., a spreadsheet rather than a PDF), including all relevant meta-data listed in item 5. For any data inputs that cannot be shared because of ethical or legal reasons, such as third-party ownership, provide a contact name or the name of the institution that retains the right to the data.	Appendix pp 29-282
Data analysis		
9	Provide a conceptual overview of the data analysis method. A diagram may be helpful.	5-7, Appendix pp 5-20
10	Provide a detailed description of all steps of the analysis, including mathematical formulae. This description should cover, as relevant, data cleaning, data pre-processing, data adjustments and weighting of data sources, and mathematical or statistical model(s).	Appendix pp 5-20
11	Describe how candidate models were evaluated and how the final model(s) were selected.	Appendix pp 5-20
12	Provide the results of an evaluation of model performance, if done, as well as the results of any relevant sensitivity analysis.	Appendix pp 5-20
13	Describe methods for calculating uncertainty of the estimates. State which sources of uncertainty were, and were not, accounted for in the uncertainty analysis.	5-7
14	State how analytic or statistical source code used to generate estimates can be accessed.	Appendix pp 5-20
Results and Discussion		
15	Provide published estimates in a file format from which data can be efficiently extracted.	14-15, appendix pp 21-28
16	Report a quantitative measure of the uncertainty of the estimates (e.g. uncertainty intervals).	14-15 appendix pp 21-28
17	Interpret results in light of existing evidence. If updating a previous set of estimates, describe the reasons for changes in estimates.	10-11
18	Discuss limitations of the estimates. Include a discussion of any modelling assumptions or data limitations that affect interpretation of the estimates.	11-12

3. Detailed description of statistical methods and codes

Statistical methods

Data imputation

As most countries did not have CS rate records yearly, we performed data imputation. First, we conducted a linear interpolation between available data points (observed CS rates) for each country. Second, missing values from 1990 through the first available data point and the latest available data point through 2018 were filled in using multiple imputations. A Markov chain Monte Carlo (MCMC) method with five imputations was performed to impute all the missing values of CS rate for each country.

Current global and regional caesarean section rates estimates

The latest available data from each country was used to calculate the current global and regional CS rates. Countries with the most recent available data in or after 2010 were included in this analysis. Countries were grouped according to the United Nations' geographical grouping. Regional and sub-regional averages for the proportion of CS were calculated as weighted means based on the country's share of live births in 2018 in the region or sub-region, respectively [using the original (Table 1) and imputed dataset (Appendix Table 1), respectively]. The average difference between CS rate estimates using the original and the imputed datasets was calculated as the weighted mean and 95% confidence intervals of the difference between the estimate CS rates at subregional level using the two datasets respectively.

"Coverage" was used as a measure to express how representative an estimate was regarding the region or sub-region. Regional and sub-regional coverage were calculated as the proportion of total regional and sub-regional live births for which nationally representative data on CS were available. Estimates for sub-regions with coverage less than 60% were not calculated.

Trends on caesarean section rates

We analyzed the piecewise trend of CS rates at the national, regional and global levels from 1990 to 2018 in three periods: 1990 to 2000, 2000 to 2010, and 2010 to 2018. Countries with a minimum of two data points (observed CS rates) within the period (1990 – 2018) were included in the analyses. We described the CS rate changes at the national, regional, sub-regional, and global levels using the imputed dataset. The CS rate changes at the national level were calculated by subtracting the earliest CS rate from the latest CS rate during each period. Regional, sub-regional and global averages for the CS rate changes were calculated as the weighted means of the CS rate changes at the national level using the number of live births of each country in 2005 as the weight.

Projections of caesarean section rates for 2030

We generated projections of CS rates in 2021, 2025 and 2030 to predict the trend of CS rates. Predictions were calculated using the autoregressive integrated moving-average (ARIMA) models fitted for the CS rate at the sub-regional level, which represented what would happen if the past decades' CS rate trajectory continued until 2030. The sub-regions were categorized into three groups based on the availability of nationally representative data on CS rates during the periods of 2010-2018, 2000-2018, or 1990-2018. Given the number of data points required for generating reliable projections of CS rates, the period of reference was determined based on the availability of nationally representative data on CS rates. Sub-regions with more than 80% of data on nationally CS rates from 2010 to 2018, we used data from this period to fit the ARIMA models. Sub-regions with more than 80% of data from 2000 to 2018, but with insufficient data from 2010 to 2018, CS rates from 2000 to 2018 were included for the projection. Sub-regions with less than 80% of data from 2000 to 2018, the ARIMA models were fitted with data for the whole period (1990-2018).

Stationarity of the CS rate series was judged by examining the autocorrelation function plots (ACF). For non-stationary series, differencing was performed to transform it into a stationary series. The minimum information criterion (MINIC), extended sample autocorrelation function (ESACF) and the smallest canonical (SCAN) correlation method were performed to identify the orders of ARIMA processes tentatively. Candidate models with the smallest BIC statistics and the residuals' autocorrelations were non-significant at the level of 0.05 were selected. Based on the final selected models, we forecasted CS rates at sub-regional level in 2021, 2025, and 2030. The projections at the regional and global level were calculated as weighted means based on the share of live births by sub-region in the corresponding year.

4. Supplementary tables and other results

Supplementary table 1: Caesarean section rates in countries categorised according to United Nations geographical grouping in 2018^a using imputed data

Region/subregion	Estimated CS rate (%, 95% CI)	Range max, (%)	(min- max, %)	Coverage of estimates (%)
Africa (n=44)	10.1 (5.6, 14.5)	1.3-60.4	89.8	
Northern Africa (n=5)	36.0 (5.2, 66.8)	12.2-60.4	97.9	
Sub-Saharan Africa (n=39)	5.7 (4.0, 7.4)	1.3-53.9	88.6	
Asia (n=40)	26.4 (21.6, 31.2)	4.3-62.7	96.9	
Central Asia (n=5)	11.9 (6.4, 17.4)	5.4-17.5	100.0	
Eastern Asia (n=5)	46.3 (35.5, 57.2)	13.0-48.8	100.0	
South-eastern Asia (n=8)	18.0 (10.6, 25.4)	4.7-36.6	94.9	
Southern Asia (n=7)	18.2 (12.9, 23.5)	4.3-41.3	96.6	
Western Asia (n=15)	35.1 (24.4, 45.8)	7.9-62.7	91.7	
Europe (n=38)	29.5 (27.0, 32.1)	14.9-44.0	98.9	
Eastern Europe (n=10)	29.8 (24.1, 35.5)	18.8-44.0	100.0	
Northern Europe (n=10)	25.9 (21.9, 29.9)	15.9-34.3	100.0	
Southern Europe (n=11)	35.7 (31.1, 40.4)	22.6-42.9	93.3	
Western Europe (n=7)	27.6 (20.4, 34.9)	14.9-36.8	100.0	
Americas (n=25)	41.3 (35.8, 46.8)	6.8-63.4	93.8	
Latin America and the Caribbean (n=23)	45.8 (39.7, 51.8)	6.8-63.4	91.1	
Northern America (n=2)	31.8 (28.5, 35.1)	31.0-31.9	100.0	
Oceania (n=7)	22.3 (6.5, 38.1)	0.0-36.6	96.5	
Australia and New Zealand (n=2)	35.1 (-7.3, 77.6)	27.6-36.6	100.0	
Melanesia, Micronesia, and Polynesia (n=5)	3.6 (-0.5, 7.7)	0.0-28.5	91.9	
World total (n=154)	23.4 (20.6, 26.1)	0.0-63.4	94.5	
More developed countries (n=45)	29.8 (27.9, 31.8)	14.9-58.3	99.4	
Less developed countries (n=70)	27.2 (22.9, 31.5)	0.0-63.4	94.6	
Least developed countries (n=39)	8.9 (6.1, 11.7)	1.3-31.8	91.9	

^aCountries with the latest CS rate record available in 2010 or later were included.

Supplementary table 2: Number of observed caesarean section rate data points and sampling period for projections.

Region/subregion	2010-2018		2000-2018		1990-2018		Sampling period
	Data points (N)	Proportion (%)	Data points (N)	Proportion (%)	Data points (N)	Proportion (%)
